Summary

Experienced Software Engineer with over 7 years of expertise in developing and scaling end-to-end secure full-stack applications. Proficient in JavaScript, Node.js, TypeScript, Java, and React.js, with hands-on experience in cloud infrastructure and DevOps. Skilled in SCRUM & Agile methodologies, with a track record of delivering high-quality, maintainable solutions. Strong communicator and team player, experienced in leading cross-functional teams, mentoring engineers, and thriving in remote and distributed settings.

Proven ability to:

- Architect systems serving over 5M+ monthly active users
- Enforce API contracts and backend service discipline
- Build scalable fintech payment infrastructures
- Prevent architectural drift through structured design governance
- Lead cross-functional engineering teams at scale

Skills

System Design: Distributed microservices architecture, Domain-driven boundary definition

Languages: JavaScript, TypeScript, Java.

Frameworks/Libraries: Node.js, Express.js, React.js, Redux, React Native.

Databases: MongoDB, PostgreSQL, Redis.

Cloud Services: AWS, GCP, DigitalOcean, Heroku

DevOps/Tools: Docker, Kubernetes, Git, CI/CD (GitHub Actions, Jenkins, Travis CI), PM2, CloudWatch, Terraform, Ansible, Helm

Other Technologies: HTML5, CSS, GraphQL, jQuery, Bootstrap

Methodologies: SCRUM, Agile, SDLC, TDD

Documentation: API Documentation, Technical Writing, Markdown, Confluence

Projects

1. [NRC](#): Nigerian Railway Corporation Warri-Itakpe e-ticketing platform.
2. [Bullion](#): Global banking for startups
3. [Prizeskout](#): Online shopping assistant and companion.
4. [Maxim](#): Flexible credit cards for immigrants
5. [Crust MFB](#): Personal and business banking.
6. [Thrive Agric](#): Access to finance and premium market for farmers
7. [Tradr](#): An e-commerce marketplace for agricultural input sales and purchases
8. [Awabah](#): Enabling access to financial security for the unbanked and underbanked
9. [Volla](#): Payment platform ecosystem for users and businesses.

Experience

Bullion – Software Developer (Remote)

August 2025 | USA

- Led development of high-availability financial platform services in production.
- Architected scalable backend systems optimized for performance and reliability.
- Improved deployment stability via structured CI/CD and release controls.
- Implemented monitoring and observability to enhance incident response.
- Provided technical leadership and mentorship across distributed teams.

TeflonHub – Lead Platform Engineer (Remote)

August 2023 – Feb 2025 | Lagos, Nigeria

- Lead design and development of core application components; full software development cycle, technical design/implementation/testing/deployment.
- Work in an Agile scrum team. Work closely with the scrum master to estimate the effort of new features.
- Ensured service stability, availability, scalability, releases, upgrades, and performance across front-end and back-end stacks.
- Mentored the engineering team on architectural best practices and distributed system design.

Payfrontier LTD – Senior Developer/CTO (Remote & Onsite)

January 2019 – 2023 | Abuja, Nigeria

- Architected a full-stack fintech platform serving 20,000+ active customers.
- Designed a microservices ecosystem across web, mobile, and administrative systems.
- Directed system-wide performance optimization and horizontal scalability planning.
- Led engineering vision, aligning business growth with technical architecture.

Thrive Agric LTD - Software Developer (Remote & Onsite)

February 2018–2022 | *Abuja, Nigeria*

- Built distributed APIs powering crowdfunding and payment platforms servicing 500,000+ monthly users.
- Architected backend modules supporting finance, operations, and growth divisions.
- Designed microservices responsible for capital allocation, user onboarding, and transaction processing.
- Enforced system stability and high-availability release cycles.
- Participated in institutional-grade system scaling across national agricultural infrastructure.
- Managed, monitored, and trained engineers across technology teams.

Freelance/Web Developer (Remote)

November 2014 - Present |

- Developed creative solutions to meet business clients' requirements based on specifications, serving over 10 million users.
- Developed and maintained a portfolio of applications to consolidate data from multiple services.
- Handled all aspects of the web applications, including design, maintenance, testing, debugging, and deployment.

UNESCO / Software Engineer - Program Manager (Onsite)

May 2016 - October 2019 | *Abuja, Nigeria*

- Delivered structured software architecture training to 400+ youths in partnership with Microsoft and UNESCO
- Designed curriculum integrating scalable backend design principles.
- Coordinated institutional-level technology program implementation.

Education

Ecotes University, De La Grace, Benin / Bachelor's degree

2017, Benin

Computer Science

Cisco / CCNA

2016

Cisco Networking

NIIT (Bics LTD) / Professional Diploma Network Engineering

2015, Abuja, Nigeria

Database administration, logic building, problem-solving, C++ object-oriented programming, Cisco Certified Network Associate (CCNA), MIS, MCSE, Linux server administration, and network security.

EC-Council / CERTIFIED ETHICAL HACKER

2013

Systems and Security

Languages

English / Fluent (C2)
